The 3 Types of Data Backups

Every business needs a solid backup strategy to protect critical data. Here's a quick overview of the top three methods to secure your business.

Full Backup
- Copies everything on your system in a single location.
- Quick and easy to restore.
- More costly method as it requires more storage.

Incremental Backup
- Saves only the changes made since the last backup.
- Ideal for frequent backups.
- Longer recovery time since more files need to be accessed.

Differential Backup
- Saves all changes made since the last full backup.
- Restores faster than incremental backups.
- Restoration is slow and complex, and backup takes longer.

Unsure which backup type fits your business best?

Let's discuss the right backup strategy for you!
